

Shaun Fix, EMT-P

Shaun has been practicing and teaching in the hospital and pre-hospital field since 1983. He is the president of Emergency Medical Consultants, Inc. and a company officer in charge of EMS for Boca Raton Fire Rescue Services in the Palm Beach area of South Florida. This team has been presenting Management of Office Emergencies for Dental Professionals since the 90's and along with Dental Specialty ACLS courses, helped present the original curriculum for the Dental Airway Course with members of the FSOMS board. Shaun has presented programs at state, national, and international conferences and has appeared on FETN, Pulse, 24-7 EMS, Medic Monthly, and Emergency Medical Update Videos. A frequent lecturer, author and consultant, Shaun and his group are best known for keeping their programs upbeat and relevant, while bringing "the reality of emergency medicine" to the classroom setting and providing onsite relevant training based on the providers specific needs.

Dr. Colin Richman

Dr. Colin Richman was born in South Africa; graduated from the University of Witwatersrand, and completed his residency in Periodontics at the University of Connecticut. He held a faculty position at Emory University School of Dentistry, until the school closed. He then entered private practice, limited to Periodontics and Implant Dentistry for the past 30 years.

Dr. Richman is an assistant professor in the Department of Periodontics at the Medical College of Georgia. He is very actively involved in Pre Orthodontic Periodontal Augmentation (POPA), and has been described as a pioneer in the emerging technology of POPA.

Dr. Richman has delivered more than 350 continuing education programs both in the US and abroad. He is the Director of the Seattle Study Club of Atlanta; belongs to numerous dental organizations including A0. He is a Diplomate of the American Board of Periodontology, and an Honorable Fellow of the Georgia Dental Association.

Friday, August 11

12:00pm – 5:00pm • 4.5 CEUs

Shaun Fix, EMT-P

Emergency Airway Management for Dental Professionals

This program meets the Florida standard by discussing monitoring and recognition of airway and respiratory emergencies in the dental setting then introducing and utilizing standard airway equipment. Through the use of video, slides, case reviews, and hands-on skills labs, participants will review the anatomy of the airway and the physiology of adequate ventilations followed by skills labs in basic and advanced procedures including:

- Initial airway skills such as effective BVM, oral and nasal airways, and perilyngeal airways will be introduced, reviewed and practiced as the first choice as well as a “rescue” or failed airway.
- Advanced skills such as basic intubation, difficult intubation, unique anatomy, unique positioning, and variations to the “normal intubation” will be practiced.
- Needle and surgical cricothyrotomies will be practiced on both manikins and animal models.

This skills-focused day will leave you with many “tricks of the trade”, feeling more confident with the airway anatomy, providing care and recognizing patients who may or may not be candidates for various procedures.

This program is specifically designed for patients in the dental practice setting utilizing equipment common and available to the dental professional 4.5 hours.

Meets the needs of all Dentists who hold an active sedation permit of any level!

Saturday, August 12

8:00am – 9:00am • 1 CEU

Corporate Forum

TBA

9:00am – 4:00pm • 5 CEUs

Dr. Colin Richman

Minimizing Esthetic and Functional Risk through Pre Orthodontic Periodontal Augmentation - POPA

These innovative dental procedures, combining regenerative periodontal therapy with orthodontic treatment, enable the dentist to minimize potential iatrogenic risk factors associated with orthodontic therapy. Favorably positioned teeth, plus an enhanced muco-gingival complex, facilitates ideal and predictable esthetics and function.

Course outline will include:

1. Treatment of existing recession and periodontitis lesions, as well as enhancement of thin biotypes. This minimizes the risk of iatrogenic gingival recession associated with orthodontic treatment.
2. Greater post treatment orthodontic stability.
3. Less apical root resorption.
4. Predictable and definitive periodontal and muco-gingival treatment.
5. Accelerated orthodontic treatment, usually completed in 6-9 months.
6. More stable and ideal tooth alignment.
7. Less need for orthognathic treatment or extractions
