COURSE DESCRIPTIONS:

Friday, August 9

12:00pm – 5:00pm • 4.5 CEUs

Shaun Fix, EMT-P (President, Emergency Medical Consultants, Inc.)
Emergency Airway Management for Dental Professionals – A Skilled Approach

The inability to control the patient's airway and ventilations is one of the greatest killers in the emergency setting. This course is designed for those familiar with the basic concept of airway management. Through the use of video, slides, case reviews, and hands-on skills labs, participants will review the anatomy of the airway and the physiology of adequate ventilations followed by skills labs in basic and advanced procedures as they relate to Dental or Oral Surgery cases.

- Initial airway skills such as effective BVM, oral and nasal airways, and perilyngeal airways will be introduced, reviewed and practiced as the first choice as well as a "rescue" or failed airway.
- Advanced skills such as basic intubation, difficult intubation, unique anatomy, unique positioning, and variations to the "normal intubation" will be practiced.
- Needle and surgical cricothyrotomies will be practiced on both manikins and animal models.

This skills-focused day will leave you with many "tricks of the trade", feeling more confident with the airway anatomy, providing care and recognizing patients who may or may not be candidates for various procedures.

This program is specifically designed for patients in the dental practice setting utilizing equipment common and available to the dental professional 4.5 hours.

Saturday, August 10

9:00am – 4:00pm • 5 CEUs

Dr. Robert Vogel

Precision, Predictability and Profitability of Implant Dentistry through a Team Approach

This scientifically based fast moving presentation designed for private practice will cover state of the art topics, tips and techniques in implant dentistry.
